

Track Auto Website Restructure Plan

Preparing the Existing Shopify Store for Multi-Vehicle Product Expansion

1. Purpose of the Restructure

As part of the rebrand from I Love Cruiser to Track Auto, the website needs to shift from a single-vehicle-focused store into a scalable aftermarket vehicle parts store.

The current website is primarily built around LandCruiser parts. This works for the existing catalogue, but it will become limiting once Track Auto starts adding products for different makes, models and vehicle platforms.

The goal of this restructure is to create a Shopify setup that allows the business to:

- Sell parts for multiple vehicle types
- Make it easy for customers to find parts that fit their vehicle
- Improve conversion rate through clearer navigation
- Improve SEO through vehicle-specific and category-specific pages
- Make future product uploads easier and more consistent
- Reduce manual work when adding new products
- Support future Google Shopping, Meta Ads and remarketing campaigns more cleanly

2. Current Website Issue

The existing website structure is mainly product-category focused.

Current style:

- Accessories
- Doors
- Bonnets
- Tubs
- Guards and Radiator Supports
- Cabins
- Suspension

This structure is acceptable for a niche store focused on one vehicle family, but it becomes harder to use once the website sells products for multiple vehicles.

3. Recommended New Website Structure

Products should be organised by both vehicle fitment and product category. Vehicle-specific products can appear under “Shop by Vehicle,” while universal or semi-universal products can sit under the relevant “Shop by Category” section. For example, a universal LED work light would sit under Lighting, while a 79 Series bonnet would sit under both 79 Series Parts and Bonnets.

Shop by Vehicle

This should become the primary customer journey. Example:

- 40 Series
- 60 Series
- 75 Series
- 76 Series
- 79 Series
- Hilux
- Patrol
- Ranger
- D-MAX
- BT-50

Each vehicle page should act as a hub page where customers can then choose product categories. Example:

79 Series Parts Hub Page

- Accessories
- Doors
- Bonnets
- Guards & Supports
- Tubs
- Cabins & Supports
- Suspension
- Lighting
- Etc

Shop by Category

“Shop by Category” should also be included because not every customer starts by selecting a vehicle. Some customers may already know the type of product they need.

Example categories:

- Accessories
- Doors

- Bonnets
- Guards & Supports
- Tubs
- Cabins & Supports
- Suspension
- Lighting
- Solar & Power
- Batteries
- Fridge/Freezers
- Interior
- Exterior
- Camping

4. Proposed Main Navigation

The new main menu should be clean and scalable.

Recommended main menu:

- Shop by Vehicle
- Shop by Category
- About Us
- Contact
- FAQs
- Blogs

5. Shopify Collection Strategy

Shopify does not work like WordPress categories where you can create unlimited nested parent and child categories in the same way. Instead, we should use collections, metafields, filters and navigation menus to create the same user experience.

The recommended collection structure is:

Vehicle Hub Collections

These are broad collections for each vehicle.

Examples:

- 60 Series Parts
- 70 Series Parts
- 79 Series Parts
- Hilux Parts
- Patrol Parts

These pages include all products that fit that vehicle.

Vehicle + Category Collections

These are more specific collections for SEO and conversion.

Examples:

- 60 Series Doors
- 60 Series Bonnets
- 79 Series Accessories
- 79 Series Doors
- 79 Series Tubs
- Hilux Accessories
- Patrol Suspension
- Ranger Lighting

These pages are more targeted and can rank better on Google because they match specific buyer searches.

Category Collections

Category collections should be the main structure for organising products by part type.

This is important because many customers will shop by the type of product they need, and many universal products will naturally sit inside these categories.

Examples:

- Accessories
- Doors
- Bonnets
- Guards & Supports
- Tubs
- Cabins & Supports
- Suspension
- Lighting
- Differentials & Lockers
- Recovery Gear
- Electrical
- Interior
- Exterior

This collection can include both vehicle-specific lighting products and universal lighting products.

Automated Collection Setup Process

To make the new Track Auto structure easy to manage long-term, we should set up automated collections after the core product metafields are created.

At the moment, the existing store relies heavily on manual product organisation and broad collections. This works for a smaller LandCruiser-focused catalogue, but it will become difficult to manage once Track Auto starts adding products for multiple vehicles and product categories.

The goal is to create a system where the client only needs to fill in the correct product fields when uploading a new product, and Shopify will automatically place that product into the right collections.

Step 1: Create the Core Metafields First (Refer to Section 7 Below)

Step 2: Enable Metafields for Automated Collections

Step 3: Create Vehicle Hub Collections

Step 4: Create Vehicle + Category Collections

6. Recommended URL Structure

The URL structure should be simple, consistent and SEO-friendly.

Examples:

- /collections/60-series-parts
- /collections/60-series-doors
- /collections/79-series-accessories
- /collections/hilux-accessories
- /collections/patrol-suspension

Product URLs should also be cleaned up where possible.

Example product naming style:

Instead of:

“Aftermarket Left Hand Rear Door for Toyota LandCruiser 60 Series”

Use:

“Aftermarket LH Rear Door Suitable for 60 Series”

This keeps the title clear, customer-friendly and less dependent on manufacturer branding.

Final naming conventions should be reviewed carefully, especially because the rebrand is partly driven by legal and trademark considerations.

7. Product Data Structure: Tags vs Metafields

To make the new website scalable, products need consistent backend data.

Recommended Approach

Use **metafields** as the main structured data source.

Use **tags** only for simple internal grouping, marketing labels or temporary campaign purposes.

Metafields are better because they reduce confusion and make filters and smart collections cleaner.

Recommended Product Metafields

Every product should include at least:

- Vehicle Make
- Vehicle Model
- Vehicle Series
- Product Department
- Fitment Position

Recommended Fields

Field	Purpose	Example
Shopify Product Category	Shopify / Google classification	Vehicle Parts, Batteries, Solar Panels
Product Type	Main customer-facing product group	Lithium Batteries, DCDC Chargers, Doors, Fridges

Product Department	Top-level navigation group	Power & 12V, Solar, Camping & Touring, Vehicle Parts
Vehicle Make	Vehicle fitment	Toyota, Nissan, Ford, Universal
Vehicle Model	Vehicle fitment	LandCruiser, Hilux, Patrol, Universal
Vehicle Series	Vehicle fitment	79 Series, GU Patrol, Universal
Fitment Position	Product fitment location	Front Left, Rear, Pair, N/A

10. Product Page Structure

All product pages should follow the same structure to improve conversion and consistency.

Recommended product page structure:

1. Product title
2. Short fitment summary
3. Price
4. Add to Cart / Freight Enquiry CTA
5. Key Features
6. Compatibility
7. Fitment & Installation Notes
8. Quality / Material Information
9. Freight & Delivery Options
10. Why Buy From Track Auto
11. Frequently Asked Questions
12. Related Products

11. Product Description Template

Every product should follow a consistent writing structure with specific content dedicated to each product, rather than being too generic.

Recommended format:

Short Intro

Explain what the product is and who it is suitable for.

Key Features

Use bullet points for easy scanning and SEO.

Example:

- Suitable for selected 60 Series models
- Supplied pre-primed
- Rust-free replacement panel
- Built for restoration and repair projects
- Australia-wide freight available

Compatibility

Clearly explain the vehicle fitment.

Installation Notes

Explain whether minor adjustment, wiring, painting, trimming or professional fitting may be required.

Product Specific FAQs

Answer the most common buyer questions for that specific product (around 3 questions)

Why Buy From Track Auto (Part of Product page template)

Reinforce brand trust:

- Fair pricing
- Quality aftermarket parts
- Australia-wide shipping
- Helpful fitment support
- Built for real 4WD owners

Freight/Shipping Information (Part of Product page template)

Important for bulky products.

11. Product Upload Checklist

When adding a new product, it is important to complete all key fields properly so the product can appear in the correct collections, filters and search results.

Field	What It Means	Example	Why It Matters
Product Title	The customer-facing product name	Aftermarket LH Rear Door Suitable for 60 Series	Helps customers and search engines understand the product
Shopify Product Category	Shopify's built-in product classification	Doors in Motor Vehicle Frame & Body Parts	Helps Shopify, Google Shopping, tax settings and sales channels classify the product
Product Type	Track Auto's website category	Doors, Bonnets, Accessories, Drivetrain	Helps organise products into website categories and automated collections
Vehicle Make	The vehicle manufacturer	Toyota, Nissan, Ford, Isuzu	Helps customers filter by vehicle make
Vehicle Model	The vehicle model	LandCruiser, Hilux, Patrol, Ranger	Helps customers find products for their specific vehicle
Vehicle Series	The specific vehicle series or variant	60 Series, 75 Series, 79 Series, GU Patrol	Helps power "Shop by Vehicle" collections and filters

Fitment Position	Where the part fits on the vehicle	Front Left, Rear Right, Front, Pair, N/A	Helps customers confirm the correct side or position
Product Description	Main product content	Features, compatibility, installation notes, FAQs	Helps with SEO, conversion and customer clarity
Product Images & Alt Text	Product photos and SEO/accessibility descriptions	"Aftermarket LH rear door suitable for 60 Series"	Improves trust, Google Image SEO and accessibility
SEO Title & Meta Description	Search result title and snippet	60 Series LH Rear Door Track Auto	Helps improve Google rankings and click-through rate

Once these fields are completed, Shopify can automatically place the product into the correct collections based on the automated collection rules.

Conclusion

The goal of this restructure is not just to update the website for the Track Auto rebrand. It is to create a cleaner, more scalable Shopify structure that can support future product expansion across multiple vehicles and part categories.

By organising the website around **Shop by Vehicle**, automated collections and consistent product data, Track Auto can make it easier for customers to find the right parts while reducing manual work for future product uploads.

Once the core metafields, product types, filters and automated collection rules are set up properly, each new product can be added in a more consistent way and automatically appear in the correct areas of the website.

This will help Track Auto build a more professional ecommerce experience, improve SEO opportunities, support future Google and Meta advertising campaigns, and create a stronger foundation for long-term growth.
